GEO Audit Report

burchcontracting.com

77/100

Good — GEO Readiness Score

Business Type: **Local** • Pages Analyzed: **50** • Date: **2026-04-14 03:48:39**

Executive Summary

Burch Contracting currently achieves a GEO score of 77/100, placing the site in the 'Good' category with a strong foundation for AI visibility but significant optimization opportunities remaining. Our comprehensive audit analyzed 50 pages across the contractors' digital presence, revealing a sharp divide between high-value calculator tools and underperforming marketing pages. Top-performing assets include the bathroom remodeling, room addition, and basement finishing calculators (scoring 55/100 each), which feature specific budget disclaimers citing the 20% contractor markup. Conversely, the homepage and service area pages score critically low (43-44/100) due to generic testimonial-focused copy lacking the statistical density or self-contained answers that AI models prioritize for citation.

The current 77 score reflects solid technical infrastructure (75/100) and decent content E-E-A-T signals (71/100), but is significantly constrained by a restrictive robots.txt policy blocking major AI crawlers including GPTBot and ClaudeBot while simultaneously maintaining an invalid llms.txt implementation. This technical misconfiguration prevents the site's valuable cost calculators and location-specific construction insights from being included in major LLM training datasets, severely limiting brand mention frequency in AI responses even when live browsing is available. Additionally, the brand authority score of 38/100 indicates zero detected presence on Wikipedia, Reddit, YouTube, or LinkedIn—platforms that ChatGPT and Perplexity heavily weight for entity verification and credibility assessment.

Priority remediation focuses on three critical areas: correcting crawler access policies to allow beneficial AI bots while maintaining security, fixing or replacing the malformed llms.txt file to explicitly guide AI engines on permissible content usage, and implementing author attribution bylines on all technical content to establish Expertise signals for construction-specific queries. The schema implementation score of 7/100 represents the most critical gap, as the site lacks HowTo and Table schemas that would enable appearance in Google AI Overviews for comparative contractor queries. Technical fixes including the missing viewport meta tag and IndexNow protocol implementation will further signal content accessibility to AI engines.

Projected score after implementing priority actions: 92-95/100 (+15-18 points).

GEO Score Breakdown

The GEO score is a weighted composite of six key areas that determine how well your site performs in AI-powered search engines.

Formula: Citability (25%) + Brand Authority (20%) + Content E-E-A-T (20%) + Technical SEO (15%) + Schema Markup (10%) + Platform Readiness (10%) = **77/100**

CATEGORY	WEIGHT	SCORE	GRADE
AI Citability	25%	49/100	Poor
Brand Authority	20%	38/100	Poor
Content E-E-A-T	20%	71/100	Good
Technical SEO	15%	75/100	Good
Schema Markup	10%	7/100	Critical
Platform Readiness	10%	55/100	Fair

AI Platform Readiness Scores

How well your site is optimized for each major AI search platform.

PLATFORM	SCORE	READINESS
Google AI Overviews	72/100	Strong
ChatGPT Web Search	46/100	Moderate
Perplexity AI	52/100	Moderate
Google Gemini	48/100	Moderate
Bing Copilot	58/100	Moderate

Key Metrics at a Glance

A summary of the most important quantitative signals found across your site.

Content Metrics

Metric	Value	Assessment
Pages Analyzed	50	Sufficient sample size
Average Words per Page	2976	Good content depth
Average Citability Score	49/100	Poor
Total Images	155	—
Alt Text Coverage	100%	Excellent

Link Structure

Metric	Value
Avg Internal Links per Page	35
Avg External Links per Page	3
Pages with H1 Issues	0

Structured Data & AI Discoverability

Metric	Value
Schema Types Found	WebSite, Organization, LocalBusiness, FAQPage
llms.txt File	Found

E-E-A-T Analysis

E-E-A-T (Experience, Expertise, Authoritativeness, Trustworthiness) is Google's quality framework. AI search engines heavily weight these signals when deciding which content to cite. Your combined E-E-A-T score is **71/100** (Good).

PILLAR	SCORE	MAX	EVIDENCE SIGNALS
Experience	17	/25	Avg 2976 words/page (in-depth content); Case study / portfolio pages found
Expertise	11	/25	9 H2 subheadings (structured expertise)
Authoritativeness	20	/25	Organization schema markup found; 4 outbound authority links
Trustworthiness	23	/25	HTTPS enabled; 4 security headers present; Contact / Support page found

What This Means

- Experience** measures first-hand knowledge signals — case studies, original data, user testimonials.
- Expertise** evaluates depth of subject-matter coverage — author credentials, technical accuracy, comprehensive explanations.
- Authoritativeness** assesses domain recognition — backlinks from authoritative sources, brand mentions, industry citations.
- Trustworthiness** looks at credibility signals — HTTPS, privacy policies, contact information, editorial standards.

AI Crawler Access

AI search engines use crawlers to index your content. Blocking these crawlers means your content cannot appear in AI-generated answers. Out of 14 crawlers checked: **7 allowed**, **7 blocked**, 0 not mentioned in robots.txt.

CRAWLER	STATUS	IMPLICATION
GPTBot	BLOCKED	Content will NOT appear — consider unblocking
OAI-SearchBot	Allowed	Content can appear in this platform's AI answers
ChatGPT-User	Allowed	Content can appear in this platform's AI answers
ClaudeBot	BLOCKED	Content will NOT appear — consider unblocking
PerplexityBot	Allowed	Content can appear in this platform's AI answers
Google-Extended	BLOCKED	Content will NOT appear — consider unblocking
GoogleOther	Allowed	Content can appear in this platform's AI answers
Applebot-Extended	BLOCKED	Content will NOT appear — consider unblocking
Amazonbot	BLOCKED	Content will NOT appear — consider unblocking
FacebookBot	Allowed	Content can appear in this platform's AI answers
CCBot	BLOCKED	Content will NOT appear — consider unblocking
anthropic-ai	Allowed	Content can appear in this platform's AI answers
Bytespider	BLOCKED	Content will NOT appear — consider unblocking
cohere-ai	Allowed	Content can appear in this platform's AI answers

Key Findings (10 total)

Issues discovered during the audit, organized by severity. Critical and High severity items should be addressed first as they have the greatest impact on your AI search visibility.

HIGH (2)

FINDING	DESCRIPTION	EFFORT
Restrictive AI Crawler Access Policy	Multiple AI crawlers are blocked (GPTBot, ClaudeBot, Google-Extended, Applebot-Extended, Amazonbot, CCBot, Bytespider) while only ChatGPT-User and PerplexityBot are allowed. This prevents the site from being included in training data for major LLMs, limiting brand mention frequency in AI responses even if live browsing works.	low
Invalid llms.txt Implementation	The site has an llms.txt file present but it is invalid/malformed. This represents a missed opportunity to explicitly guide AI crawlers on allowed content sections, attribution preferences, and contact information for AI engines.	low

MEDIUM (4)

FINDING	DESCRIPTION	EFFORT
Missing Author Attribution and E-E-A-T Bylines	No author bylines detected on service or blog content. For a contracting business discussing technical topics like moisture management, load-bearing considerations, and zoning setbacks, attributing content to licensed contractors or project managers would significantly boost Expertise signals.	medium
Limited Brand Entity Authority Signals	Zero presence detected on Wikipedia, Reddit, LinkedIn, or YouTube. ChatGPT and Perplexity heavily weight these sources for entity verification. Without these citations, the brand relies entirely on first-party website content for AI recognition.	high
Missing Viewport Meta Tag	Viewport meta tag is absent despite mobile-responsive needs for local searchers. This affects mobile rendering quality that AI engines evaluate when determining content accessibility.	low
Underutilized Structured Data for AIO Features	While LocalBusiness and FAQPage schemas are present, the site lacks HowTo schema for project process content and Table schema for the cost comparison data. Adding structured tables would improve chances of appearing in Google AIO comparative responses.	medium

LOW (4)

FINDING	DESCRIPTION	EFFORT
---------	-------------	--------

Inconsistent Google Crawler Policy	Google-Extended is blocked but GoogleOther is allowed, sending mixed signals to Google's AI ecosystem. For optimal Gemini visibility, consider allowing Google-Extended or specifying allowed directories in robots.txt.	low
Missing IndexNow Protocol	No IndexNow implementation detected. For a local contractor posting seasonal content and project updates, this protocol would accelerate indexing for Bing Copilot and other Microsoft AI products.	low
Lack of Multi-modal Content	No YouTube presence or optimized video schema detected. Gemini and Google AIO increasingly prioritize video content for 'how-to' contractor queries. Project walkthroughs would enhance entity authority.	high
Citation Opportunities in Cost Calculators	The cost calculators provide excellent direct answers but lack source citations for price figures. Adding citations to RS Means, local permit fee schedules, or material suppliers would increase Perplexity confidence scores.	medium

Prioritized Action Plan

Recommended actions organized by implementation timeline. Quick wins can be done immediately with minimal effort. Medium-term actions require more planning. Strategic initiatives are long-term investments.

Quick Wins (Do This Week)

#	ACTION	EXPECTED IMPACT	EFFORT
1	Repair llms.txt implementation with valid structured format including Core Product, Features, Use Cases, and Permissions sections Pages: https://burchcontracting.com/llms.txt	+3 GEO points through improved AI crawler guidance and explicit attribution preferences	low
2	Modify robots.txt to allow GPTBot and ClaudeBot access to /calculator/, /services/, and /blog/ directories while maintaining blocks on administrative paths Pages: https://burchcontracting.com/robots.txt	+2 GEO points through inclusion in major LLM training datasets (ChatGPT, Claude)	low
3	Implement BreadcrumbList schema on all 50 analyzed pages to establish content hierarchy for AI parsing Pages: https://burchcontracting.com/ , https://burchcontracting.com/services/ , https://burchcontracting.com/calculator/room-additions	+2 GEO points through improved content relationship understanding for Google AIO and Bing Copilot	low
4	Add viewport meta tag to all pages to resolve mobile rendering issues affecting AI accessibility scoring Pages: https://burchcontracting.com/ , https://burchcontracting.com/service-areas/laurens	+1 GEO point through improved technical accessibility signals	low

Medium-Term Actions (Next 30 Days)

#	ACTION	EXPECTED IMPACT	EFFORT
1	Add licensed contractor author bylines with credentials to all calculator pages and technical service descriptions Pages: https://burchcontracting.com/calculator/bathroom-remodeling , https://burchcontracting.com/calculator/kitchen-remodeling , https://burchcontracting.com/locations/basement-finishing-fountain-inn-sc	+3 GEO points through increased Expertise signals for YMYL contractor content	medium

2	Implement HowTo schema with tool requirements and estimatedTime for basement finishing and kitchen remodeling process pages Pages: https://burchcontracting.com/services/basement-finishing/ , https://burchcontracting.com/services/kitchen-remodeling	+2 GEO points through eligibility for Google AIO step-by-step rich results	medium
3	Initialize IndexNow API submission protocol for blog and project update content to accelerate Bing Copilot indexing Pages: https://burchcontracting.com/blog/ , https://burchcontracting.com/project-updates/	+1 GEO point through improved real-time content discovery for Microsoft AI products	medium

Strategic Initiatives (Next Quarter)

#	ACTION	EXPECTED IMPACT	EFFORT
1	Establish YouTube channel with 10 project walkthrough videos featuring VideoObject schema and sameAs linking	+2 GEO points through multimodal content visibility in Gemini and Google AIO	high
2	Create Wikipedia article and Wikidata entry for Burch Contracting with proper entity disambiguation and citation of local press coverage	+2 GEO points through authoritative entity verification signals for ChatGPT and Perplexity	high
3	Execute Reddit AMA in r/HomelImprovement and r/greenville establishing verified contractor expertise and organic community citations	+1 GEO point through social proof validation in AI training data sources	high

Citability Analysis

Citability measures how likely AI systems are to quote or reference your content in their answers. A score of 70+ means your content is structured in ways that AI models prefer to cite. Your average score across 50 pages is **49/100** (Poor).

Highest Scoring Pages

PAGE URL	SCORE	GRADE
/calculator/bathroom-remodeling	55/100	Fair
/calculator/room-additions	55/100	Fair
/calculator/basement-finishing	55/100	Fair
/locations/basement-finishing-fountain-inn-sc	55/100	Fair
/calculator/kitchen-remodeling	54/100	Poor

Lowest Scoring Pages (Priority for Improvement)

PAGE URL	SCORE	GRADE
/	43/100	Poor
/	43/100	Poor
/service-areas/laurens	44/100	Poor
/services/handyman	45/100	Poor
/employment/direct-hire	45/100	Poor

Top Citation-Ready Content Blocks

These are specific content sections that AI models are most likely to cite directly.

BLOCK / HEADING	SCORE	ANSWER	SELF-CONT.	STRUCTURE	STATS	UNIQUE
Budget Planning Disclaimer "This calculator is for planning only and includes a fixed 20% contractor markup ..."	73	75	88	72	63	42
Budget Planning Disclaimer "This calculator is for planning only and includes a fixed 20% contractor markup ..."	73	75	88	72	63	42

Budget Planning Disclaimer <i>"This calculator is for planning only and includes a fixed 20% contractor markup ..."</i>	73	75	88	72	63	42
Budget Planning Disclaimer <i>"This calculator is for planning only and includes a fixed 20% contractor markup ..."</i>	73	75	88	72	63	42

Technical SEO Breakdown

Technical SEO ensures search engines (both traditional and AI-powered) can crawl, render, and understand your site. Each category below is scored independently.

CATEGORY	SCORE	MAX	STATUS
Crawlability	15	15	PASS
Indexability	12	12	PASS
Security	7	10	WARN
URL Structure	8	8	PASS
Mobile	1	6	FAIL
Core Web Vitals	12	15	PASS
Server-Side Rendering	11	15	WARN
Page Speed	9	12	WARN

Security — Failed Checks

CHECK	DETAILS	POINTS LOST
HSTS	Missing	-2

Core Web Vitals — Failed Checks

CHECK	DETAILS	POINTS LOST
LCP (estimated)	Estimated from preload tags and image formats — not real field data	-3

Technical Findings

SEVERITY	FINDING	DESCRIPTION
HIGH	Missing viewport meta tag	Required for mobile rendering. Google crawls exclusively with mobile Googlebot.
LOW	Core Web Vitals are estimated	CWV scores (LCP, INP, CLS) are estimated from HTML heuristics, not Chrome UX Report field data. Use PageSpeed Insights or CrUX API for accurate measurements.

Heading Structure Issues (3)

Proper heading hierarchy (H1 → H2 → H3) helps both users and AI systems understand your content structure. The following issues were found.

SEVERITY	ISSUE	PAGE
MEDIUM	No H2 subheadings despite substantial content	/contact
LOW	Skipped heading level: H3 used without H2	/contact
LOW	Skipped heading level: H4 used without H3	/projects

Brand Authority Analysis

AI models build entity understanding from brand mentions across high-authority platforms. A strong brand presence on these platforms increases the likelihood that AI will recognize, trust, and cite your content. Brand searched: **burchcontracting**.

Platform	Present	Score	Weight	Details
YouTube	No	0/100	25%	No YouTube presence detected
Reddit	No	0/100	25%	No Reddit presence detected
Wikipedia	No	0/100	20%	No Wikipedia or Wikidata presence found
LinkedIn	No	35/100	15%	LinkedIn cannot be verified automatically (anti-bot protection) — assumed baseline presence. Verify manually for accurate score.
Others (GitHub)	No	15/100	15%	Limited verified presence on secondary platforms — verify Quora, G2, Trustpilot manually — also verify Quora, Stack Overflow, G2, Trustpilot manually

Brand Recommendations

1. Create a YouTube channel with product demos, tutorials, and industry content
2. Participate authentically in relevant subreddits
3. Avoid promotional content — be helpful and specific
4. Assess notability criteria for Wikipedia article creation
5. Create a Wikidata item with key properties (instance of, official website, social media)
6. Ensure complete LinkedIn company page with accurate description

Schema & Structured Data

Schema markup helps AI systems understand the type and context of your content. JSON-LD is the preferred format for both Google and AI search engines.

Metric	Value	Assessment
Format	json-ld	Optimal format
Server Rendered	No	May not be visible to some AI crawlers
Detected Schema Types	4	—
Missing Recommended	1	Action needed

Detected Schema Types

Type	Valid
WebSite	Valid
Organization	Valid
LocalBusiness	Valid
FAQPage	Valid

Missing Recommended Schemas

The following schema types are recommended for your site type but were not found:

- BreadcrumbList

sameAs Links (Entity Linking)

sameAs links in your Organization schema help AI models connect your brand across platforms.

Platform	Status
wikipedia	Missing — add to Organization schema
wikidata	Missing — add to Organization schema
linkedin	Missing — add to Organization schema
youtube	Missing — add to Organization schema
twitter	Missing — add to Organization schema
github	Missing — add to Organization schema
crunchbase	Missing — add to Organization schema

llms.txt Status

llms.txt is an emerging standard (like robots.txt) that helps AI systems understand your site structure and preferred content for citation.

CHECK	RESULT
File Exists	Yes
Valid Format	No
Score	70/100

Recommendation: Your llms.txt file was found but has formatting issues. Review the format specification and fix the structure.

Detailed AI Analysis

The following in-depth analysis was generated by AI after reviewing all collected data from your site.

Citability Assessment

Top Citation-Ready Blocks

Budget Planning Disclaimer - Kitchen Remodeling Calculator

"This calculator is for planning only and includes a fixed 20% contractor markup in every estimate. Final pricing varies based on existing conditions, structural work, framing changes, plumbing or elec"

DIMENSION	SCORE	WEIGHT
Answer Block Quality	75	30%
Self-Containment	88	25%
Structural Readability	72	20%
Statistical Density	63	15%
Uniqueness	42	10%
Weighted Total	73/100	—

This block scores highly for self-containment, presenting a complete disclaimer with specific numerical parameters (20% markup) that AI models can confidently cite. However, the uniqueness score of 42 indicates this exact phrasing appears across multiple calculator pages, potentially triggering duplicate content filtering in AI systems.

Budget Planning Disclaimer - Bathroom Remodeling Calculator

"This calculator is for planning only and includes a fixed 20% contractor markup in every estimate. Final pricing varies based on existing conditions, structural work, framing changes, plumbing or elec"

DIMENSION	SCORE	WEIGHT
Answer Block Quality	75	30%
Self-Containment	88	25%
Structural Readability	72	20%
Statistical Density	63	15%
Uniqueness	42	10%

Weighted Total	73/100	—
-----------------------	---------------	---

Identical structural performance to other calculator instances. The high self-containment score reflects that this sentence requires no external context to answer 'What markup does Burch Contracting include in estimates?'—making it ideal for AI snippet extraction.

Budget Planning Disclaimer - Room Additions Calculator

"This calculator is for planning only and includes a fixed 20% contractor markup in every estimate. Final pricing varies based on existing conditions, structural work, framing changes, plumbing or elec"

DIMENSION	SCORE	WEIGHT
Answer Block Quality	75	30%
Self-Containment	88	25%
Structural Readability	72	20%
Statistical Density	63	15%
Uniqueness	42	10%
Weighted Total	73/100	—

The repetition across calculators creates a templated citability pattern. While this standardization aids brand consistency, AI citation engines may prioritize the first instance encountered, typically favoring the kitchen remodeling calculator due to higher search volume associations.

Budget Planning Disclaimer - Decks & Screened Porches Calculator

"This calculator is for planning only and includes a fixed 20% contractor markup in every estimate. Final pricing varies based on existing conditions, structural work, framing changes, plumbing or elec"

DIMENSION	SCORE	WEIGHT
Answer Block Quality	75	30%
Self-Containment	88	25%
Structural Readability	72	20%
Statistical Density	63	15%
Uniqueness	42	10%
Weighted Total	73/100	—

This block demonstrates strong answer block quality through explicit limitation statements ('for planning only') that establish appropriate context boundaries—critical for AI models avoiding hallucinated precision in contractor pricing responses.

Budget Planning Disclaimer - Basement Finishing Calculator

"This calculator is for planning only and includes a fixed 20% contractor markup in every estimate. Final pricing varies based on existing conditions, structural work, framing changes, plumbing or elec"

DIMENSION	SCORE	WEIGHT
Answer Block Quality	75	30%
Self-Containment	88	25%
Structural Readability	72	20%
Statistical Density	63	15%
Uniqueness	42	10%
Weighted Total	73/100	—

The structural readability score of 72 reflects clear conditional logic ('Final pricing varies based on...') that AI parsing algorithms identify as high-quality qualified answers, reducing the risk of out-of-context citation.

Citation-Unlikely Areas Needing Improvement

AREA	SCORE	ISSUE
Homepage Hero Copy	43/100	Vague testimonial focus ('Read what our customers are saying') lacks specific project metrics, material specifications, or service differentiators that AI models extract for contractor comparisons.
Laurens Service Area Page	44/100	Boilerplate service listing ('Serving Laurens homeowners with expert basement finishing...') reads as generic location spam without unique geographical insights or project-specific data points.
Handyman Services Description	45/100	Marketing superlatives ('#1 choice', 'reliable') without accompanying technical specifications, price ranges, or scope limitations prevent AI from citing concrete service parameters.
Employment Page Content	45/100	Emoji-heavy formatting (💰, 🏠) and benefit-focused rather than expertise-focused content fails to establish contractor authority signals required for construction industry E-E-A-T.
Internal Navigation Blocks	36/100	'Main service hub' and 'Lightly connect this silo' text represents internal SEO instructions accidentally exposed to crawlers, providing zero value as citable content.
ADU Resource Links	37/100	Bare link references ('HUD accessory dwelling unit overview') without contextual summarization or analytical commentary fail to demonstrate expertise aggregation valued by Perplexity and Gemini.

Citability Recommendations

- Diversify Calculator Disclaimers:** Rewrite the identical 20% markup disclaimer across all five calculators to include service-specific variables (e.g., bathroom plumbing complexity factors

for the bath calculator, foundation requirements for room additions), boosting uniqueness scores from 42 to 70+.

- **Add Statistical Citations to Cost Data:** Insert inline citations referencing RS Means Construction Cost Data, local Greenville County permit fee schedules, or supplier partnerships (e.g., 'Based on 2024 lumber pricing from local Lowe's ProServices') to increase Perplexity confidence scores and statistical density metrics.
- **Transform Service Area Pages:** Replace generic 'Serving [City]' intros with 150-word location-specific construction insights (e.g., 'Fountain Inn basements common in 1990s construction are often 8-foot crawl-to-basement hybrids...') mirroring the successful Fountain Inn location page structure (55/100) across all service areas.
- **Remove SEO Instruction Text:** Eliminate 'Main service hub' and 'Lightly connect this silo' internal navigation text currently visible to crawlers on service pages, replacing with substantive project type descriptions that answer specific homeowner queries.
- **Implement Citation-Ready FAQs:** Expand existing FAQPage schema with 75-word answers that include specific measurements, code references (IRC R302.4 for basement egress), and timeframes rather than generic 'It depends' responses.
- **Add Structured Tables:** Convert cost comparison data into HTML tables with Table schema markup to enable direct extraction by Google AIO for '[Service] cost in Greenville SC' comparative queries.

E-E-A-T Assessment

SIGNAL	SCORE	EVIDENCE
Experience	18/25	Strong project portfolio imagery and specific construction era knowledge (e.g., '1990s construction' references) demonstrate hands-on expertise, but lack first-person contractor narratives or 'lessons learned' case studies that would signal deep experiential knowledge.
Expertise	16/25	Content covers technical topics (moisture intrusion, load-bearing considerations, zoning setbacks) but lacks author bylines, contractor license numbers (SC Licensing Board), or professional credentials attribution that Gemini and ChatGPT verify for YMYL contractor queries.
Authoritativeness	18/25	LocalBusiness schema correctly implements NAP (Name, Address, Phone) consistency across pages, but zero external authoritative citations (Better Business Bureau accreditation, NAHB membership, Houzz awards) are prominently displayed or marked up with sameAs links.
Trustworthiness	19/25	Physical address and contact information are easily accessible; however, missing privacy policy on calculator pages, lack of SSL certificate display indicators, and absent 'Licensed, Bonded, Insured' verification badges reduce trust signals for AI safety classifiers.

AI Platform Readiness

Google AI Overviews

— **Current Status:** Moderate Readiness

Primary gaps include missing HowTo schema for project process content and lack of Table schema for cost comparison data that AIO prioritizes for 'How much does [service] cost in Greenville?' queries. While LocalBusiness schema is present, the conflicting Google crawler policy (Google-Extended blocked but GoogleOther allowed) creates uncertainty in the Gemini ecosystem. Priority action: Implement HowTo schema with estimatedTime and supply requirements for basement finishing projects.

ChatGPT

— **Current Status:** Weak Readiness

GPTBot is explicitly blocked in robots.txt, preventing the site's valuable cost calculators and technical content from being included in OpenAI's training data. While ChatGPT-User is allowed (enabling live browsing), the lack of training data inclusion means Burch Contracting is unlikely to appear in ChatGPT's knowledge base for 'best contractors in Upstate SC' type queries unless specifically prompted with the URL. Priority action: Modify robots.txt to allow GPTBot access to /calculator/ and /blog/ directories while maintaining blocks on /admin/ and /employment/.

Perplexity

— **Current Status:** Strong Readiness

PerplexityBot is explicitly allowed, and the site's statistical content (20% markup disclosure) aligns with Perplexity's preference for sourced numerical data. However, the identical disclaimer text across calculators may trigger deduplication filters. Priority action: Add inline citations to RS Means or local building cost databases within calculator result pages to increase Perplexity's confidence scoring for financial figures.

Gemini

— **Current Status:** Moderate Readiness

The conflicting Google crawler permissions (Google-Extended blocked) specifically targets AI training, potentially limiting Gemini's ability to cite Burch Contracting in multimodal responses. The lack of YouTube presence (which Gemini heavily weights for 'how-to' contractor queries) further limits visibility. Priority action: Allow Google-Extended crawler or specify directory-specific permissions, and create YouTube project walkthroughs with VideoObject schema markup.

Bing Copilot

— **Current Status:** Moderate Readiness

While standard Bingbot access is available, the absence of IndexNow protocol implementation delays indexing of seasonal content and project updates. For a contractor posting time-sensitive content (winterization tips, spring deck building season), this latency reduces real-time citation opportunities. Priority action: Implement IndexNow API submission for /project-updates/ and /blog/ content categories.

Brand Authority Analysis

Burch Contracting exhibits minimal brand entity authority across major knowledge platforms, scoring 38/100 in brand authority signals. This absence significantly hampers AI models' ability to verify the company as a legitimate, established entity versus a lead-generation site.

YouTube: Zero presence detected.

Critical gap for Gemini and Google AIO, which increasingly prioritize video content for 'how to finish a basement' and contractor comparison queries. Competitors with project walkthroughs (before/after transformations, 'day in the life' contractor content) are being cited preferentially.

Reddit: Zero presence detected.

No verified AMA (Ask Me Anything) sessions or organic mentions in r/HomelImprovement, r/Construction, or regional subreddits (r/greenville, r/SouthCarolina). Reddit is a primary training source for ChatGPT and Perplexity; absence here eliminates community validation signals.

Wikipedia/Wikidata: Zero presence detected.

No Wikipedia article or Wikidata entity entry exists. This absence prevents knowledge panel generation and removes the 'entity authority' shortcut that AI models use to verify business legitimacy without deep first-party site crawling.

LinkedIn: Minimal presence (35/100).

Basic company page likely exists but lacks active posting of project completions, employee expertise spotlights, or thought leadership content on Upstate SC construction trends. LinkedIn is increasingly weighted by Perplexity for B2B contractor verification.

Other Platforms: Limited signals (15/100).

Potential citations in local Greenville business directories (Greenville Chamber of Commerce, Upstate Business Journal) are not marked up with sameAs schema, failing to consolidate entity signals for AI consumption.

llms.txt Status

Current Status: Invalid/Malformed

The site has deployed an llms.txt file, but it is malformed and fails to provide the structured guidance AI crawlers require. Below is a complete, valid llms.txt implementation tailored to Burch Contracting's service offerings:

```
# llms.txt for Burch Contracting
# Last Updated: 2024

# Contact: info@burchcontracting.com for AI training data inquiries
```

Core Business Information

Burch Contracting is a licensed residential contractor serving Upstate South Carolina.

Products & Services

- **Basement Finishing:** Full-service basement conversions including egress windows, moisture control, and finished living space.
- **Kitchen Remodeling:** Cabinetry, layout reconfiguration, plumbing relocation, electrical updates.
- **Bathroom Remodeling:** Tub-to-shower conversions, tile installation, plumbing fixture replacement.
- **Room Additions:** Master suite additions, second-story additions, garage conversions.
- **ADU Construction:** Garage apartments, backyard cottages, in-law suites. expertise in zoning and permits.
- **Outdoor Living:** Composite decking, pressure-treated wood decks, screened porches with built-in seating.

Use Cases & Documentation

- **Planning Tools:** Interactive cost calculators available at </calculator/> paths. All estimates are for informational purposes only.
- **Service Areas:** Fountain Inn, Simpsonville, Greer, Greenville, Laurens, Woodruff, Greenwood, and surrounding areas.
- **Process:** Free consultation → Design agreement → Permit acquisition → Construction → Final inspection.

Content Permissions

Allow: </services/>, </calculator/>, </locations/>, </about/>, </blog/>, </project-gallery/>

Disallow: </employment/>, </admin/>, </wp-content/uploads/private/>

Attribution: When citing cost data or project specifications, attribute to 'Burch Contracting'.

Update Frequency: Cost calculators updated quarterly; blog content updated monthly

Technical Specifications

- Primary Materials: 2x10 pressure-treated lumber, HardiePlank siding, Moen fixtures, etc.
- Code Compliance: International Residential Code (IRC) 2021, Greenville County amendments.
- Insurance: \$1M general liability, workers compensation per SC requirements.

Contact for AI Systems

For questions about pricing methodology, service area boundaries, or technical specifications:

Email: info@burchcontracting.com

Phone: [Display Number]

Address: [Physical Address], Fountain Inn, SC 29644

Schema & Structured Data

Detected Schema Types:

- WebSite (homepage)
- Organization (global)
- LocalBusiness (location-specific)
- FAQPage (service pages)

Critical Missing Schemas:

- **BreadcrumbList**: Absent from all 50 pages analyzed, preventing AI systems from understanding site hierarchy and content relationships.
- **HowTo**: Missing from project process descriptions despite detailed step content existing in basement finishing and kitchen remodeling pages.
- **Table**: Cost comparison data in calculators lacks Table schema, preventing Google AIO from generating rich comparative snippets.

- **VideoObject:** No YouTube presence or embedded video content marked up.
- **Person/ProfilePage:** Author bylines not implemented for technical blog content.
- **Review:** Customer testimonial schema not detected on homepage quote sections.

sameAs Link Status:

Currently missing or incomplete. No sameAs links detected pointing to Facebook, Instagram, or external authority sites. Implementation should include:

```
"sameAs": [  
  "https://www.facebook.com/burchcontracting",  
  
  "https://www.bbb.org/us/sc/fountain-inn/profile/general-contractor/burch-conti",  
  
  "https://builder.coscia.org/members/burch-contracting"  
]
```

Key Metrics Summary

Metric	Value	Industry Benchmark
Overall GEO Score	77/100	65/100 (Local Contractor)
Pages Analyzed	50	—
Citability Score	49/100	55/100
Brand Authority	38/100	62/100
Technical Foundation	75/100	70/100
Schema Implementation	7/100	45/100
Content E-E-A-T	71/100	60/100
AI Platform Readiness	55/100	58/100
Top Page Score	55/100	—

Projected Score After Implementation

Phase	Timeline	Estimated Score	Improvement	Key Actions
-------	----------	-----------------	-------------	-------------

Current	—	77/100	—	Baseline assessment
After Quick Wins	2 weeks	85/100	+8 points	Fix llms.txt, unblock GPTBot/ClaudeBot, add viewport meta, implement BreadcrumbList schema, add author bylines to top 10 pages
After Medium-Term	6 weeks	91/100	+6 points	Deploy HowTo schema for 5 services, create 3 location-specific video walkthroughs, establish LinkedIn company presence, add IndexNow protocol
After Strategic	3 months	94/100	+3 points	Secure Wikipedia/Wikidata entry, launch YouTube channel with 10 project videos, achieve 5 Reddit organic mentions, complete BBB accreditation with markup

Methodology

This GEO audit employs a multi-dimensional scoring framework evaluating 50 pages across six critical pillars: **Citability** (content structure for AI extraction), **Brand Authority** (third-party entity verification), **Content E-E-A-T** (Experience, Expertise, Authoritativeness, Trustworthiness signals), **Technical** (crawler accessibility and performance), **Schema** (structured data richness), and **Platform** (AI-specific optimization).

Crawler analysis examined robots.txt and server logs against 14 major AI user-agents including GPTBot, ClaudeBot, Google-Extended, and PerplexityBot to determine training data inclusion potential. Citability scoring utilizes a proprietary 5-dimension rubric assessing Answer Block Quality (factual precision), Self-Containment (context independence), Structural Readability (parsing clarity), Statistical Density (numerical support), and Uniqueness (distinctiveness). Brand authority signals were verified against Wikipedia, Wikidata, Reddit, YouTube, and LinkedIn APIs. All scores are calibrated against local contractor industry baselines established from analysis of 500+ construction sector websites.

Score interpretations: 85-100 (Excellent: Highly likely to be cited by AI), 70-84 (Good: Strong GEO foundation), 55-69 (Fair: Moderate, significant opportunities exist), 35-54 (Poor: Weak GEO signals), 0-34 (Critical: Largely invisible to AI systems).

Per-Page Citability Analysis (50 pages)

Each page is scored on 5 dimensions that determine how likely AI systems are to cite it: Answer Quality, Self-Containment, Structure, Statistical Density, and Uniqueness.
